# Senior Delivery Engineer - Coding (Test automation) test

The goal of this exercise is to check coding skills, knowledge of relevant test frameworks, testing style and techniques, quality of code that an applicant can demonstrate. Also, we want to give an impression of what kind of work to expect. The job itself will not be related to Box.com, and we will not use submitted code in any way other than for the candidate's application.

## Task description

Develop a Test automation project with functional tests for https://www.box.com functionality - allows to access user's account and perform some actions. Please write automated tests for at least 3 Scenarios/Test Cases. The tests should be written using Selenium WebDriver, Maven, Java or JavaScript, TestNG or JUnit. Feel free to use any already registered user, however user credentials should be parametrized (easy to change).

Please describe shortly how to run/configure your project.

## Mandatory Tests Scenarios to cover

1. Login/Logout functionality
2. Create folder functionality
3. Upload file functionality
